Adam Hultman

Full-stack software engineer · Vancouver, BC

Product engineering across web, mobile, and backend systems, with ownership of reliability, performance, calculation correctness, and billing. Independent work in applied AI and C++ audio software.

Experience

Kopperfield

Full Stack Engineer · July 2025 - Present

- Led the Never Lose Data initiative from a customer report through architecture, a 21-ticket plan, and production delivery, adding device-local drafts and automatic synchronization of documents created offline.
- Reduced load-calculation API p75 latency from 1,322 ms to 160 ms in production, measured over two-week windows with 10,000+ requests each. A controlled 20-row benchmark reduced database queries from 624 to 24.
- Built a regression harness replaying approximately 236,000 historical electrical load calculations. Corrected lookup-table discrepancies against published source data and tightened reference tests before the Fault Current Calculator launched.
- Owned subscription and entitlement workflows serving approximately 2,300 paying customers; improved Stripe webhook retry handling, moved plan changes into the application, and added daily billing reconciliation.
- Led Kopperfield Cam from design through Android and iOS releases, implementing job-site photo workflows, native annotation, and document export while coordinating approximately 160 launch requirements.

Assembly Digital Media

Software Developer · September 2022 - July 2025

Built publishing tools and automation across WordPress, AWS, and AI-assisted editorial workflows.

Earlier at Assembly: part-time developer, May–August 2022; full-stack co-op, September–December 2021.

Earlier engineering experience

Schneider Electric · Software Designer - Co-op
January 2021 - September 2021

Island Temperature Controls · Full-stack Software Developer - Co-op
May 2019 - December 2019

Adam Hultman · Selected projects & technical background

Independent products

Perspective Labs Inc.

Product development across applied AI, property intelligence, and audio. These projects are in development or at prototype stage.

Delve

In development · working name

Built a property-analysis prototype combining listing extraction, deterministic risk scoring, financial calculations, and AI-assisted strata-document analysis, with evidence snippets and extraction-coverage tracking.

TypeScript · Next.js · PostgreSQL · Prisma · OpenAI

Parallax Studio

In development

Implemented asynchronous video-generation workflows with GPU job dispatch, progress and failure handling, media storage, and usage accounting. Built integrations for voiceover, transcription, upscaling, and script generation.

TypeScript · Next.js · Inngest · RunPod · Supabase · Cloudflare R2

Earbud

Prototype

Developed a C++/JUCE audio-plugin prototype with A-weighted metering, calibration profiles, exposure estimation, and configurable muting. Added DSP component tests and build targets for VST3, Audio Unit, and a standalone app.

C++ · JUCE · DSP · CMake · VST3 · Audio Unit

Technical skills

TypeScript, React, Next.js, Python, Django, React Native, GraphQL, PostgreSQL, AWS, Stripe, automated testing, AI integrations, asynchronous job processing, C++, JUCE.

Education

University of Victoria

Bachelor of Software Engineering · August 2022
Specialization in cybersecurity and privacy.
